The Slimline: How We do it

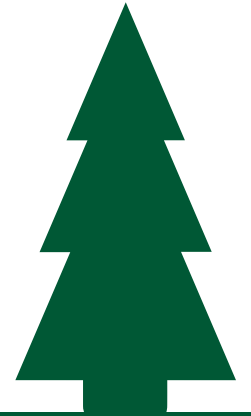

With a rise in modern homes, and flats, we spotted an opportunity about five years ago to develop a range of Nordmann Fir trees which are slimmer so that they fit more easily into the home.

Original Nordman Fir

Our clients told us that they loved the Nordmann firs beautiful glossy foliage, vibrant green colour and low needle drop but wanted a tree that was slimmer in stature without losing its bushy shape.

Slimline Nordman Fir

With careful pruning by skilled professionals over several years, we have been able to produce a slimline Nordmann fir that is perfect for customers who want a tall but compact tree. A Nordmann slimline tree is the result of many years of hard work and attention to detail.

After 6 years, We hand-select the trees we believe will make the best slimline tree based on their shape, and their development. The trees are pruned very hard over years 6, 7 and 8 to keep a slim shape, but keeping them full to the top. All of the pruning is done by hand by skilled professionals. In the final two years before the tree is harvested, the pruning is limited to the regular regime. This allows the tree to fill out, leaving a lovely full tree, that is also slim.
